Performance

Indexed value (until 31-08-2025) - Source: Robeco

Performance

Based on transaction prices, the fund's return was -0.13%.

The fund posted a small negative return over the month, but above its index. While the overweight duration position was more or less flattish to performance, yield curve positioning contributed again. Although we think the ECB is done cutting for now, risks for yields are tilted to the downside, as Europe seems vulnerable to Trump renegotiating the US-EU trade deal because of the digital sales tax. Most of the steepening is taking place in long and ultralong maturities, which continues to be impacted by more issuance and changing pension regulations. Country positioning also contributed. Especially the underweight position in French government bonds benefited the relative return of the portfolio. During the month, the fund selectively reduced positions in expensive government-related bonds. The corporate allocation of the fund is above that of its index, and predominantly located in short-dated corporate bonds.

Market development

Government bond returns were mixed in August, with US Treasuries (+0.8%) gaining, while European government bonds were down somewhat. German Bunds ended the month down -0.2%. Weak US payrolls explain most of the strong returns of US Treasuries. Front-end US yields rallied, but the curve steepened as the market is getting increasingly worried about Fed independence. In Europe, rates rose after ECB officials commented on a prolonged pause in the easing cycle. French PM Francois Bayrou spooked markets by announcing a vote of confidence on his government on 8 September. OAT spreads widened and dragged other spread markets along. Curves steepened in Europe, as an expected increase in issuance meets a weakening pension fund demand for long-end bonds. On credit ratings, there was positive and negative news. Portugal got upgraded to A+ by S&P and Austria (Aa1) saw its outlook changed to negative by Moody's.

Expectation of fund manager

The Fed is expected to cut interest rates at its September meeting. A 25-bps cut is fully priced for this meeting, as well as three additional cuts by June next year. We agree with these expected cuts. The attempts to push the Fed into more cuts and undermine independence are a growing concern. This could increase the inflation risk and should lead to a higher risk premium in longer-term bonds. For the ECB, we expect rates to remain unchanged for now. Market pricing has been reflecting this view, which has created more attractive entry levels for overweight duration positions. Still, EGB curves could steepen as well, especially in longer-dated maturities. Issuance is expected to increase, while demand for longer-dated bonds is seen to slow. French OATs will likely continue to suffer from a lack of political agreement on reducing the fiscal deficit.

Fund price

31-08-25	EUR	114.79

Legal status

Investment company with variable capital incorporated under Luxembourg law (SICAV)	
Issue structure	Open-end
UCITS V	Yes
Share class	F EUR
This fund is a subfund of Robeco Capital Growth Funds, SICAV	

Registered in

Austria, Belgium, Germany, Luxembourg, Netherlands, Spain, Switzerland

Currency policy

Relatively small positions in currencies other than the euro are permitted. Derivatives can be used for various reasons such as hedging single positions and arbitrage, or for leverage to gain extra exposure.

Risk management

Risk management is fully embedded in the investment process to ensure that positions always meet predefined guidelines.

Dividend policy

The fund does not distribute dividend but retains all income in the portfolio, so total performance is reflected in the price.

Derivative policy

Robeco All Strategy Euro Bonds make use of derivatives for hedging purposes as well as for investment purposes. These derivatives are regarded very liquid.

Sector allocation

Around 35% of the fund is invested in treasury bonds, well below the index. The overall beta of the portfolio including SSA, covered and swap spreads is around 1.3, with the corporate beta around 1.2. The fund has a small overweight position in both investment grade and high yield corporate bonds, which is partly hedged to the iTraxx Crossover. Within SSA, the fund has an overweight in long-dated EU bonds. The fund has a 15% allocation to green, social and sustainable bonds, predominantly consisting of government-related issuers.

ESG Important information

The sustainability information in this factsheet can help investors integrate sustainability considerations in their process. This information is for informational purposes only. The reported sustainability information may not at all be used in relation to binding elements for this fund. A decision to invest should take into account all characteristics or objectives of the fund as described in the prospectus. The prospectus is available on request and free of charge on the Robeco website.

Sustainability

The fund incorporates sustainability in the investment process via exclusions, negative screening, ESG integration, limits on investments in companies and countries based on ESG performance as well as engagement. For government and government-related bonds, the fund complies with Robeco's exclusion policy for countries, excludes the 15% worst ranked countries following the World Governance Indicator 'Control of Corruption', and ensures the fund has a minimum weighted average score of at least 6 following Robeco's proprietary Country Sustainability Ranking. The Country Sustainability Ranking scores countries on a scale from 1 (worst) to 10 (best) based on 40 environmental, social, and governance indicators. For corporate bonds, the fund does not invest in credit issuers that are in breach of international norms or where activities have been deemed detrimental to society following Robeco's exclusion policy. Financially material ESG factors are integrated in the bottom-up security analysis to assess the impact on the issuer's fundamental credit quality. In the credit selection the fund limits exposure to issuers with an elevated sustainability risk profile. Lastly, where issuers are flagged for breaching international standards in the ongoing monitoring, the issuer will become subject to engagement.

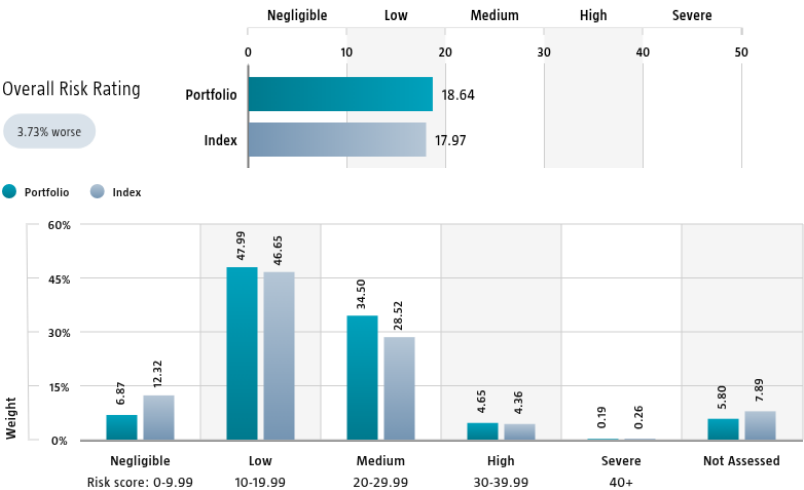

For more information please visit the sustainability-related disclosures.

The index used for all sustainability visuals is based on Bloomberg Euro Aggregate.

Sustainalytics ESG Risk Rating

The Portfolio Sustainalytics ESG Risk Rating chart displays the portfolio's ESG Risk Rating. This is calculated by multiplying each portfolio component's Sustainalytics ESG Risk Rating by its respective portfolio weight. The Distribution across Sustainalytics ESG Risk levels chart shows the portfolio allocations broken into Sustainalytics' five ESG risk levels: negligible (0-10), low (10-20), medium (20-30), high (30-40) and severe (40+), providing an overview of portfolio exposure to the different ESG risk levels. Index scores are provided alongside the portfolio scores, highlighting the portfolio's ESG risk level compared to the index.

Only holdings mapped as corporates are included in the figures.

Environmental Intensity - Government bond allocation

Environmental intensity expresses a portfolio's aggregate environmental efficiency. The portfolio's aggregate carbon intensity is based on the related country emissions. We divide each country's carbon emissions, measured in tCO₂, by the population size or gross domestic product to obtain the country's carbon intensity. The portfolio's aggregate intensity figures are calculated as a weighted average by multiplying each assessed portfolio component's intensity figure with its respective position weight. Index intensities are provided alongside the portfolio intensities, highlighting the portfolio's relative carbon intensity. Only holdings mapped as sovereign bonds are included in the figures.

CO₂ Emissions
tCO₂/capita
5.04% worse

Source: EDGAR

CO₂ Emissions
tCO₂/mUSD GDP
19.30% worse

Source: EDGAR

Environmental Footprint - Credit allocation

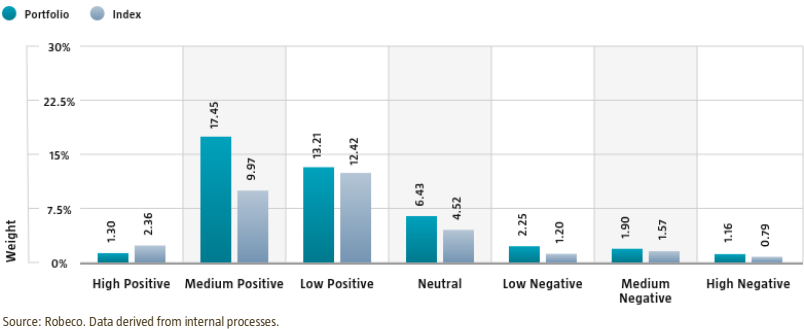

Environmental footprint expresses the total resource consumption of the portfolio per mUSD invested. Each assessed company's footprint is calculated by normalizing resources consumed by the company's enterprise value including cash (EVIC). We aggregate these figures to portfolio level using a weighted average, multiplying each assessed portfolio constituent's footprint by its respective position weight. For comparison, index footprints are shown besides that of the portfolio. The equivalent factors that are used for comparison between the portfolio and index represent European averages and are based on third-party sources combined with own estimates. As such, the figures presented are intended for illustrative purposes and are purely an indication. Only holdings mapped as corporates are included in the figures.

SDG Impact Alignment

This distribution across SDG scores shows the portfolio weight allocated to companies with a positive, negative and neutral impact alignment with the Sustainable Development Goals (SDG) based on Robeco's SDG Framework. The framework utilizes a three-step approach to assess a company's impact alignment with the relevant SDGs and assign a total SDG score. The score ranges from positive to negative impact alignment with levels from high, medium or low impact alignment. This results in a 7-step scale from -3 to +3. For comparison, index figures are provided alongside that of the portfolio. Only holdings mapped as corporates are included in the figures.

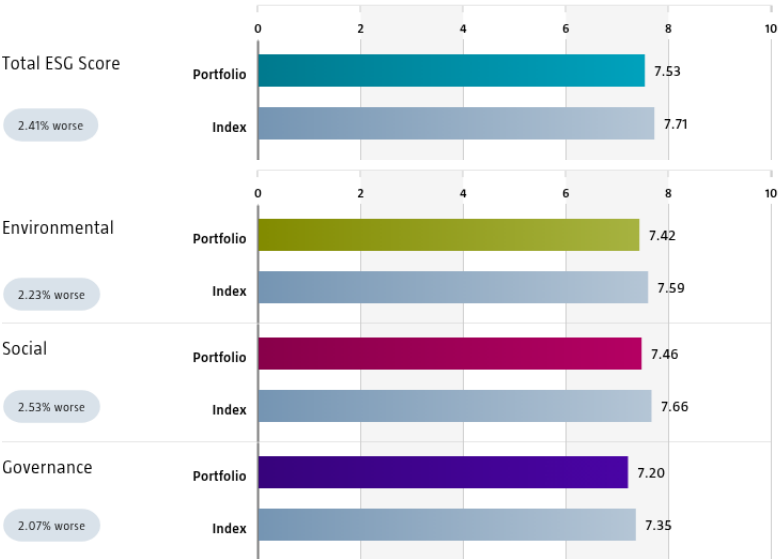

ESG Labeled Bonds

The ESG-labeled bond chart displays the portfolio's exposure to ESG-labeled bonds. Specifically, green bonds, social bonds, sustainability bonds, and sustainability-linked bonds. This is calculated as a sum of weights for those bonds in the portfolio that have one of above mentioned labels. Index exposure figures are provided alongside the portfolio exposure figures, highlighting the difference with the index.

Country Sustainability Ranking

The charts displays the portfolio's Total, Environmental, Social and Governance scores following Robeco's Country Sustainability Ranking methodology. These are calculated using the portfolio components' weights and respective country's scores. The scores includes considerations of more than 50 separate indicators, each capturing a unique sustainability feature across environmental, social and governance dimensions at the country level. Index scores are provided alongside the portfolio scores, highlighting the portfolio's relative ESG performance. Only holdings mapped as sovereign bonds are included in the figures.

Engagement

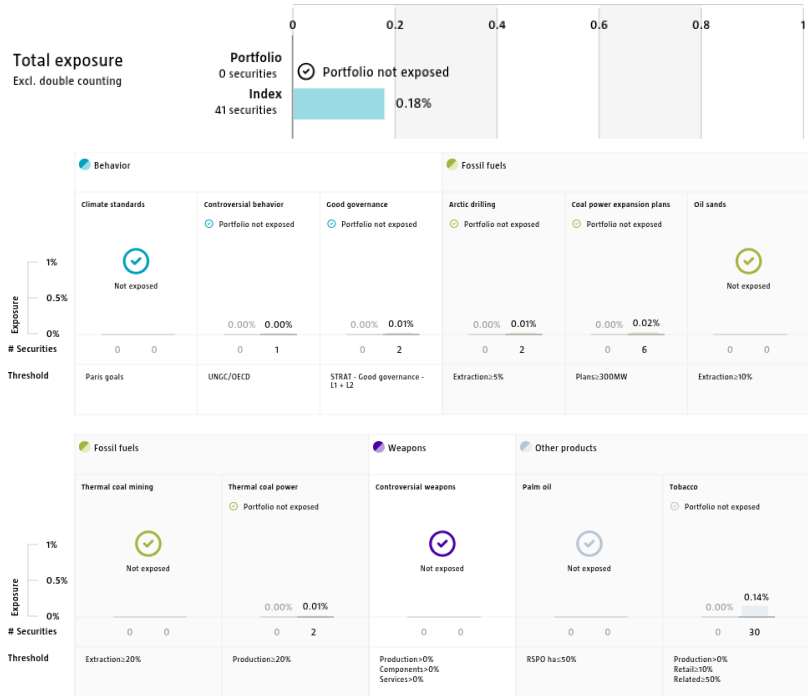

Robeco distinguishes between three types of engagement. Value Engagement focuses on long-term issues that are financially material and/or are causing adverse sustainability impacts. The themes can be broken into Environmental, Social, Governance, or Voting-related. SDG Engagement aims to drive a clear and measurable improvement in a company's SDG contribution. Enhanced engagement is triggered by misconduct and focuses on companies severely breaching international standards. The report is based on all companies in the portfolio for which engagement activities have taken place during the past 12 months. Note that companies may be under engagement in multiple categories simultaneously. While the total portfolio exposure excludes double counting, it may not equal the sum of individual category exposures.

	Portfolio exposure	# companies engaged with	# activities with companies engaged with
Total (* excluding double counting)	4.68%	28	110
Environmental	2.72%	14	62
Social	0.62%	4	12
Governance	0.29%	3	10
Sustainable Development Goals	0.66%	5	23
Voting Related	0.50%	3	3
Enhanced	0.00%	0	0

Exclusions

The Exclusions charts display the degree of adherence to exclusion applied by Robeco. For reference, index exposures are shown beside that of the portfolio. Thresholds are based on revenues unless otherwise indicated. For more information about the exclusion policy and which level applies, please refer to the Exclusion Policy and Exclusion List available on Robeco.com.

Prior to joining Robeco in 2024, she worked at Manulife as an analyst and as a fixed income portfolio management associate with a focus on sovereigns, currencies and macro-economic analysis. She started her career in the industry in 2017 at Manulife. She holds a Bachelor's in Finance from Bentley University and is a CFA® Charterholder.

Fiscal product treatment

The fund is established in Luxembourg and is subject to the Luxembourg tax laws and regulations. The fund is not liable to pay any corporation, income, dividend or capital gains tax in Luxembourg. The fund is subject to an annual subscription tax ('tax d'abonnement') in Luxembourg, which amounts to 0.05% of the net asset value of the fund. This tax is included in the net asset value of the fund. The fund can in principle use the Luxembourg treaty network to partially recover any withholding tax on its income.

Fiscal treatment of investor

The fiscal consequences of investing in this fund depend on the investor's personal situation. For private investors in the Netherlands real interest and dividend income or capital gains received on their investments are not relevant for tax purposes. Each year investors pay income tax on the value of their net assets as at 1 January if and inasmuch as such net assets exceed the investor's tax-free allowance. Any amount invested in the fund forms part of the investor's net assets. Private investors who are resident outside the Netherlands will not be taxed in the Netherlands on their investments in the fund. However, such investors may be taxed in their country of residence on any income from an investment in this fund based on the applicable national fiscal laws. Other fiscal rules apply to legal entities or professional investors. We advise investors to consult their financial or tax adviser about the tax consequences of an investment in this fund in their specific circumstances before deciding to invest in the fund.
